6 ABSTRACT OF THE INVENTION  
7

8 A system for utility garments provides the wearer of a variety of  
9 garments including blazers, lab coats, and vests with the option of removing  
10 pockets and discarding the garment for disposal or cleaning, while not having  
11 to remove the contents of the pockets. The wearers who would benefit from  
12 such garments include medical workers. The pockets may have one or more  
13 compartments to place items needed by the wearer during use. In one  
14 embodiment the pockets or the garment or both may be disposable to  
15 prevent spread of infection and similar problems.
